AI Engineer Core Track

Murali Manohar

Automation Engineer at Chaarvedha
Visakhapatnam, Andhra Pradesh, India

Summary

I'm an AI Engineer with a background in Machine Learning, Deep Learning, NLP, Computer Vision, and Graph Neural Networks, with a growing focus on LLM and Generative AI engineering. I enjoy building practical AI systems that go beyond basic LLM API calls. My recent work includes building and deploying end-to-end LLM applications covering:

- Retrieval-Augmented Generation (RAG)
- LLM fine-tuning with LoRA / QLoRA
- AI agents and multi-agent systems
- Tool and function calling
- Vector embeddings and semantic search
- LLM-based applications using open-source and commercial models

As part of my LLM Engineering training, I built 8 end-to-end applications including a RAG knowledge worker, fine-tuned price predictor, autonomous deal-finding agent, multimodal customer-support agent, meeting-minutes generator, code optimizer, website summarizer, and financial analysis agent. Previously, I worked as a Graduate Research Assistant at the University of Siegen, where I researched Graph Neural Networks for metascheduler decision-making and published a peer-reviewed IEEE paper on neighbourhood aggregation in GNNs. My technical background includes Python, PyTorch, TensorFlow, Scikit-learn, LangChain, Hugging Face, SQL, Docker, Git, and Linux. I'm currently looking for opportunities as an AI Engineer, Generative AI Engineer, or LLM Engineer where I can apply my ML background and hands-on LLM engineering skills to real-world problems.

Experience

InAmigos Foundation (IAF)
Content Writer
August 2026 - Present (1 month)
Bengaluru

Write Content for the project to make an impact in society.

Chaarvedha

Automation Engineer

April 2026 - June 2026 (3 months)

Bengaluru

- Programmed and coordinated five industrial automation projects for automotive and manufacturing clients.
- Worked on an OCR-based inspection system, robotic pick-and-place system, and sensor-integrated assembly line.
- Diagnosed and resolved faults in existing PLC programs.
- Gained hands-on experience with servo motors, KUKA robot teaching, industrial panel wiring, and manufacturing automation systems.

Universität Siegen

Graduate Research Assistant

September 2022 - May 2024 (1 year 9 months)

Siegen

- Researched Graph Neural Networks (GNNs) for improving metascheduler decision-making in distributed computing environments.
- Designed and implemented neighbourhood aggregation strategies for GNN architectures to study scheduling efficiency and scalability.
- Built experimental pipelines to evaluate and benchmark GNN model variants using performance, accuracy, and efficiency metrics.
- Conducted comparative analysis of aggregation levels in Multi Scheduled Graphs (MSG) to identify configurations for task scheduling and resource allocation.
- Authored and published a peer-reviewed IEEE paper on neighbourhood aggregation levels in GNNs for metaschedulers.

Education

Universität Siegen

Master of Science, Mechatronics, Robotics, and Automation

Engineering · (September 2019 - May 2024)

Lovely Professional University

Bachelor's degree, Mechanical Engineering · (2014 - 2018)
